**BRIEF AMICUS CURIAE OF HEALTH INSURANCE  
ASSOCIATION OF AMERICA IN SUPPORT OF  
JURISDICTIONAL STATEMENTS**

**INTEREST OF AMICUS CURIAE**

Health Insurance Association of America ("HIAA"), a Delaware nonprofit corporation, is an association of 327 private insurance companies, including the Appellants, Metropolitan Life Insurance Company and The Travelers Insurance Company. HIAA's member companies write over 85% of the health insurance policies written by private insurance companies in the United States and provide health insurance coverage to approximately 108

million people in the United States. See Source Book of Health Insurance Data 1982-83 at 13-20, Health Insurance Association of America. Approximately 85% of these people are covered under group health insurance policies, a substantial majority of which provide health insurance coverage to employee benefit plans that are regulated by the Employee Retirement Income Security Act of 1974 ("ERISA"), 29 U.S.C. §§ 1001 *et seq.*

HIAA and its member companies are vitally interested in these appeals because they will resolve an issue that has perplexed the health insurance industry since the enactment of ERISA — namely, whether state mandated health benefit laws are enforceable against plans governed by ERISA.

A mandated health benefit law is one that requires a health insurance policy to provide coverage for a particular health care service. For example, Section 47B of Massachusetts General Laws Chapter 175 ("Section 47B") requires that all health insurance policies provide certain minimum benefits to Massachusetts residents for expenses arising from the treatment of mental or nervous conditions.<sup>1</sup> Mandated health benefit laws, like Section 47B, are

<sup>1</sup> Mandated health benefit laws, such as Section 47B, are the most obtrusive of a variety of state laws that attempt to affect the health benefits provided by employee benefit plans. Mandated health benefit laws, like Section 47B require that a policy include certain benefits, so that if the plan elects to purchase any coverage, it must purchase the mandated coverage. Another kind of state law requires that the insurance company make available certain benefits to anyone who wishes the coverage, but does not require that the coverage be purchased. Some state laws, like Section 47B, require that certain types of treatment be covered irrespective of the provider whose services are utilized. Others require that the services of certain classes of providers be covered — for example, the services of podiatrists or chiropractors or social workers. Some, like Section 47B, apply to all forms of health insurance policies. Others apply only to group or only to individual health

intended to dictate the benefits to be included in group health insurance policies and, therefore, are intended to have a direct impact on plans governed by ERISA.

As stated in greater detail below, HIAA and its member companies have consistently opposed the enactment of state mandated health benefit laws on the grounds that these laws restrict design flexibility, inhibit uniformity in benefit packages, increase costs to employers and employees and promote self-funding of benefit plans.

The importance of these appeals to HIAA and its member companies goes far beyond the particular state law in question; for these appeals may well determine the validity not only of Section 47B, but of other state mandated health benefit laws that are intended to apply to group health insurance policies issued to plans governed by ERISA.

Because much private health insurance is sold to employee benefit plans governed by ERISA, because state mandated health benefit laws undermine the ability of insurance companies and employee benefit plans to provide plan members needed coverage at a reasonable cost and because this Court's decision will have far-reaching effects, these appeals are of substantial interest and importance to HIAA and its member companies.

insurance policies. Some apply only to policies that provide reimbursement for expenses actually incurred while others apply as well to those policies that pay fixed sums of money regardless of the actual treatment expenses incurred. Some, like Section 47B, are applicable to all residents of the enacting state. Others are limited to policies issued or delivered in the enacting state. The Appendices to this Brief attempt to provide a generalized state-by-state summary of these laws, together with an indication of the category into which each law falls along the continuum of state laws that attempt to affect the health benefits provided by employee benefit plans.

For the reasons stated below, HIAA and its member companies submit that the Supreme Judicial Court for the Commonwealth of Massachusetts was wrong in holding that Section 47B is not preempted by ERISA. Accordingly, HIAA, as the national trade association of the private health insurance industry, files this Brief Amicus Curiae in Support of the Jurisdictional Statements filed by the Appellants. Consent to the filing of this Brief has been obtained from counsel for the Appellants and the Appellee.

### SUMMARY OF ARGUMENT

This Court has never addressed the question of whether ERISA preempts a state mandated health benefit law that is intended to apply to group health insurance policies issued to employee benefit plans governed by ERISA. These appeals pose this question in the context of the enforceability of Section 47B against employee benefit plans insured by policies issued by the Appellants.

It is undisputed that a state mandated health benefit law, such as Section 47B, which is intended to dictate particular benefits provided by an employee benefit plan *relates* to an employee benefit plan and, therefore, comes within the scope of Section 514(a) of ERISA, 29 U.S.C. § 1144(a), which preempts any state law insofar as it relates to an employee benefit plan governed by ERISA. The issue posed by these appeals is whether Section 47B is *saved* from preemption by Section 514(b)(2)(A) of ERISA, 29 U.S.C. § 1144(b)(2)(A), because it accomplishes its purpose through the plan's health insurance policy.

HIAA submits that Section 47B, like other state mandated health benefit laws, is not intended to regulate insurance. A state mandated health benefit law is intended to promote the utilization of particular health care services and is enacted, not for the protection of the insureds, but for the benefit of the consumer and provider

of those health care services for which coverage is required. This Court's most recent decisions on the breadth of the ERISA preemption and the narrowness of the exceptions to that preemption dictate the conclusion that a state mandated health benefit law is not a law that regulates insurance within the meaning of Section 514(b)(2)(A) of ERISA, 29 U.S.C. § 1144(b)(2)(A) and, therefore, may not be enforced against an employee benefit plan governed by ERISA.

### ARGUMENT

HIAA asks the Court to note probable jurisdiction in order to reverse the decision below.

#### 1.

Twenty-six states have enacted mandated health benefit laws, covering a wide range of health care services. Half of these have enacted laws, similar to Section 47B, requiring health insurance coverage for the treatment of mental and nervous disorders. One reason for the widespread appearance of state mandated health benefit laws for the treatment of mental and nervous disorders has been the devoted pursuit of this objective by organizations of mental health care providers, most notably psychiatrists, psychologists, psychotherapists and social workers.

The purpose of state mandated health benefit laws is to make the services of particular health care providers more accessible to the consumers of these services by shifting the payment obligation away from the consumer to a third party, typically the employer.<sup>2</sup> This increases the util-

<sup>2</sup> Even though the insurance policy provides the benefits and the insurance company either pays the provider or reimburses the consumer, it is the employer that typically bears the payment obligation through the payment of insurance premiums. Premiums for most group coverage are based on prior claims experience. Therefore, what is paid by the insurance company in claims is ultimately paid by the employer in premiums.

ization of the health care services for which benefits are mandated and virtually guarantees that the provider of the services will be paid a reasonable fee for services rendered. It is little wonder that in state after state health care providers have been the principal, and in many instances the only, advocates of mandated health benefit laws.

HIAA and its member companies have consistently opposed the enactment of mandated health benefit laws for the following reasons:<sup>3</sup>

1. *State mandated health benefit laws erode the ability of insurance companies to tailor health benefit packages to meet the needs of particular employee benefit plans and to market group health insurance policies to large employee benefit plans on a national basis.* A cost-effective package of health benefits requires both *flexibility* and *uniformity* — that is, flexibility to design a program that meets the objectives of the plan and uniformity that permits each employee, regardless of the state in which he works or lives, to receive the same benefits and to bear the same costs for these benefits as other members of the plan. State mandated health benefit laws frustrate these design requirements. As a result of state mandated health benefit laws, employers and unions are forced to purchase coverages that they neither want nor need. Not only does this unnecessarily increase the cost of insurance for employee benefit plans, it also reduces the number of dollars available to these plans for other, more desired benefits. Moreover, if a mandated health benefit law is

<sup>3</sup> See, generally, Robert E. Younger, "Mandated Insurance Coverage — the Achilles Heel of State Regulation?" XXIV Association of Life Insurance Counsel Proceedings 765-82 (1978); Arnold E. Buchman, "Extraterritorial Application of State Mandated Group Health Benefits" 15 The Forum 880-88 (1980), for a discussion of the detrimental effects of state mandated health benefit laws on group health insurance.

drafted so that it applies to all residents of the state regardless of whether the group policy itself was issued or delivered in the state,<sup>4</sup> uniformity of benefits is impossible, for the benefits provided by the group policy must conform not only to the statutory requirements of the state in which the policy was issued and delivered but also, with respect to any insured living in the state which enacted the mandated health benefit law, to the requirements of that law. This not only introduces administrative complexity, which increases the cost of providing health insurance to the plan, but also results in inequities among plan members inasmuch as some members receive greater benefits than others simply by reason of the state in which they live.

2. *State mandated health benefit laws are a major contributor to the rapidly escalating cost of health insurance for employee benefit plans.* Conservative estimates place the cost of mandated benefits at approximately 10% of the policy premium. Others in the industry believe that a more realistic estimate would place the cost of mandated benefits closer to 20% of the policy premium. Mandated health benefit laws contribute to increased costs for several reasons. First, the policy becomes more complicated and, therefore, more costly to administer. These administrative costs are "dead dollars" in that they do not result in increased policy benefits. Second, the policy becomes more expensive because it carries coverages that

<sup>4</sup> Such laws are generically referred to as "extraterritorial". Because group insurance policies are traditionally governed by the laws of the jurisdiction in which they are issued and delivered rather than the laws of the jurisdiction in which each insured lives or works, *Boseman v. Connecticut General Life Insurance Co.*, 301 U.S. 196 (1937), state laws are said to have extraterritorial application when they are intended to affect policies issued and delivered in other jurisdictions. Because Section 47B applies to all group policies, regardless of the state of issuance and delivery, to the extent such policies insure Massachusetts residents, Section 47B is extraterritorial.

the plan was forced by law to purchase. Third, the policy becomes more expensive because the underlying health care costs increase as a result of increased, but often unnecessary, utilization of the services for which coverage is mandated.

3. *State mandated health benefit laws promote self-insurance.* Coverages that are required by state law but unwanted by the insurance purchaser increase the likelihood that a purchaser will choose to buy *no* health insurance at all rather than bear the cost of unwanted coverages. Employers and unions have done precisely this in order to avoid the impact of state mandated health benefit laws. Rather than purchasing insurance for their employee benefit plans, many employers and unions have elected to fund the benefits themselves. Ironically, ERISA has promoted this trend toward self-funding because states have not been permitted by federal law to require *uninsured* employee benefit plans to provide particular health benefits.<sup>5</sup> When an employer or union chooses *not*

<sup>5</sup> The deemer clause of Section 514(b)(2)(B) of ERISA, 29 U.S.C. § 1144(b)(2)(B) prohibits states from using the savings clause of Section 514(b)(2)(A) of ERISA, 29 U.S.C. § 1144(b)(2)(A), to regulate employee benefit plans by treating such plans as insurers, banks, trust companies or investment companies. Courts have consistently interpreted and applied the deemer clause to prohibit state regulation of uninsured plans. *Dawson v. Whaland*, 529 F. Supp. 626 (D. N.H. 1982); *General Split Corporation v. Mitchell*, 523 F. Supp. 427 (E.D. Wisc. 1981); *St. Paul Electrical Workers Welfare Fund v. Markman*, 490 F. Supp. 931 (D. Minn. 1980); *Hewlett-Packard Company v. Barnes*, 425 F. Supp. 1294 (N.D. Cal. 1977); *aff'd per curiam*, 571 F.2d 502 (9th Cir. 1978). Indeed, one of the major ironies of this case is that if state mandated health benefit laws were to be held to be preserved by the savings clause of Section 514(b)(2)(A) of ERISA, 29 U.S.C. § 1144(b)(2)(A) with respect to *insured* plans, employers and unions would be encouraged to reject insurance and to provide uninsured plans to employees and union members, thereby freeing themselves from mandated health benefit laws by means of the deemer clause of Section 514(b)(2)(B) of ERISA, 29 U.S.C. § 1144(b)(2)(B). Because the

to purchase health insurance for its employee benefit plans, employees and union members suffer because uninsured health benefits are inherently less secure. State insurance laws and regulations protect against insurance company insolvency. No similar protections are available to assure that the assets of an uninsured plan will be sufficient to pay benefits to plan members.

Moreover, because of the self-funding option, mandated health benefit laws tend to create an artificial distinction between large and small employee benefit plans, a distinction never intended or contemplated by Congress. Large plans are likely to have the financial resources to self-fund and to avoid compliance with the state mandated health benefit laws. Small plans, by contrast, are likely to be compelled by their smaller financial resources either to purchase insurance and submit to state mandated health benefit laws or to join uninsured multiple employer trusts which, as a class, have been plagued historically by financial instability.

HIAA submits that, as a matter of sound public policy, employers and unions should *not* be forced to choose between submitting to costly and restrictive state mandated health benefit laws or leaving the health benefits of their employee benefit plans uninsured. HIAA further submits that this sound public policy is reflected in ERISA and that, as a matter of *federal law*, employee benefit plans may *not* be required by state law to provide mandated health benefits, irrespective of whether these plans are insured or uninsured.

benefits of an uninsured plan are less secure than those of an insured plan, this result is in conflict with the stated purpose of ERISA "to protect . . . the interests of participants in employee benefits plans and their beneficiaries. . . ." 29 U.S.C. § 1001.

## 2.

In enacting ERISA, Congress did *not* intend to save from preemption state laws, such as Section 47B, which require *insured* employee benefit plans to provide certain health benefits.

This Court has previously held that ERISA's preemption of state law is to be construed broadly and that the specific exceptions to that preemption are to be construed narrowly, *Shaw v. Delta Air Lines, Inc.*, 103 S. Ct. 2890 (1983); *Alessi v. Raybestos-Manhattan, Inc.*, 451 U.S. 504 (1981). However, this Court has not before had the opportunity to construe or apply the exception in Section 514(b)(2)(A) of ERISA, 29 U.S.C. § 1144(b)(2)(A), which saves from preemption "any law of any State which regulates insurance. . . ."

A number of appellate courts have addressed the relationship of a state mandated health benefit law and ERISA. *Attorney General v. The Travelers Insurance Company*, 391 Mass. 730, 463 N.E.2d 548 (1984); *Insurance Commissioner v. Metropolitan Life Insurance Company*, 296 Md. 334, 463 A.2d 793 (1983); *Wadsworth v. Whaland*, 562 F.2d 70 (1st Cir. 1977). Not one, however, has engaged in a serious analysis of whether a state mandated health benefit law is one that regulates insurance within the meaning of Section 514(b)(2)(A) of ERISA, 29 U.S.C. § 1144(b)(2)(A).<sup>6</sup>

<sup>6</sup> Not coincidentally, the one appellate court that did engage in such an analysis concluded that the state mandated health benefit law in question did *not* regulate insurance within the meaning of Section 514(b)(2)(A) of ERISA, 29 U.S.C. § 1144(b)(2)(A), and held the state law unenforceable against a group health insurance policy issued to an employee benefit plan governed by ERISA. *Metropolitan Life Insurance Company v. Insurance Commissioner*, 51 Md. App. 122, 441 A.2d 1098 (1982), *rev'd* 296 Md. 334, 463 A.2d 793 (1983).

The question posed by these appeals is far more complex than a reading of the opinions cited above might lead one to believe. It is not enough simply to assume, as these courts have, that, because a mandated health benefit law is found in the state insurance code, it is a law that regulates insurance.<sup>7</sup> The issue posed by the instant appeals is not whether a state mandated health benefit law *affects* insurance policies but whether it is a law that *regulates* insurance within the meaning of Section 514(b)(2)(A) of ERISA, 29 U.S.C. § 1144(b)(2)(A). This is an issue of *federal law* that is simply too important to be left to state courts that are not constitutionally empowered to resolve it in an authoritative manner. Because this issue affects scores of state laws throughout the nation and potentially every employee benefit plan governed by ERISA, it demands a final and definitive resolution by this Court.

## 3.

Other than emphasizing the narrowness of the exceptions to the sweeping preemption of Section 514(a) of ERISA, 29 U.S.C. § 1144(a), the legislative history of ERISA does not indicate Congress' view on what types of state laws it deemed to regulate insurance. Logically, one may presume that Congress was concerned with not casting the net of preemption over legitimate, traditional state insurance regulation which might incidentally interact with employee benefit plans but not have a substantive effect on the plans, directly or indirectly.

<sup>7</sup> See, e.g., *Stone & Webster Engineering Corporation v. Ilsley*, 518 F. Supp. 1297, 1299 n.2 (D. Conn. 1981), *aff'd* 690 F.2d 323 (2nd Cir. 1982) in which the court held that a state law requiring employer contributions to an employee fund providing life and health insurance benefits was not a law regulating insurance but rather a law aimed at *employers* and, as such, was preempted by ERISA.

Mandated health benefit laws clearly do not fall within the scope of traditional state insurance regulation and clearly do have a direct substantive effect on employee benefit plans.

The primary and traditional purpose of state insurance regulation is to protect the *insured* from the *insurer* in matters dealing with the cost and reliability of coverage (including the solvency of insurance companies) and the fairness of underwriting decisions and marketing practices. As the U.S. District Court for the District of Kansas, in distinguishing an employee benefit plan preempted from state regulation by ERISA from a non-ERISA plan subject to state regulation, stated, the traditional purposes of insurance regulation are:

"first to avoid overreaching by insurers; second, to assure solidity and solvency of insurers; third, to assure that rating classifications and rates are reasonable and fair."

*Bell v. Employee Security Benefit Association*, 437 F. Supp. 382, 391 (D. Kan. 1977), quoting with approval from Note, *Insurance Regulation — Employee Benefit Plans*, 28 Ark. L. Rev. 515, 517-18 (1975). Mandated health benefit laws do not address any of these traditional concerns of insurance regulation, but instead address concerns of health-care utilization and reimbursement. Consequently, such laws do not regulate insurance within the meaning of Section 514(b)(2)(A) of ERISA, 29 U.S.C. § 1144(b)(2)(A).

Whatever Massachusetts' interest may be in mandating health benefits to protect the interests of health-care providers and consumers, it may not elevate this state interest above *federal* regulation of employee benefit plans unless it can establish that this interest falls within one of the narrow exceptions to the preemption of Section 514(a) of ERISA, 29 U.S.C. § 1144(a). This it has not done, and given the nature of Section 47B, this it cannot do.

To the extent that Section 47B relates to the benefits provided by employee benefit plans regulated by ERISA, federal law must prevail over state law, and the determination of the benefit mix to be provided by such plans must be allowed to proceed under the protection of federal regulation and the collective bargaining process,<sup>8</sup> unfettered by a state law, the clear purpose of which is *not* to regulate insurance at all but rather to use the financial resources of insurance companies, employers, unions and employee benefit plans to promote the increased utilization of certain health care services and, not incidentally, to protect the financial interests of certain classes of health care providers.

<sup>8</sup> By intruding on the collective bargaining process through which many of the benefits provided under employee benefit plans are determined, mandated health benefit laws also unreasonably interfere with collective bargaining as protected under federal labor law. *Cf. Alessi v. Raybestos-Manhattan, Inc.*, *supra*, 451 U.S. at 525-26, in which this Court observed that where pension plans "emerge from collective bargaining, the additional federal interest in precluding state interference with labor-management negotiations calls for preemption of state efforts to regulate pension terms. [Citations omitted.] As a subject of collective bargaining, pension terms themselves become expressions of federal law, requiring preemption of intrusive state law." By analogy, to the extent the benefit mix in an employee benefit plan is subject to collective bargaining, the state's attempt to interfere with this process by enacting mandated health benefit laws contravenes federal labor policy. The jurisdictional statement of the Appellant The Travelers Insurance Company, to which statement HIAA subscribes completely, addresses this aspect of these appeals in detail.

## CONCLUSION

For the reasons stated, probable jurisdiction should be noted.

Respectfully submitted,
